

YOUCAM API SKIN AI HACKATHON · SKIN AI TRACK

# Parasol

## Sun safety for people with albinism, and every skin on the road.

One selfie and your trip in. A day-by-day skin forecast that always uses the most protective setting for albinism, and a carry-on kit for every skin.

parasol-topaz.vercel.app

THE PROBLEM

# For people with albinism, strong sun can burn in minutes. Sun advice ignores them.

## 1 in 5,000

people in Sub-Saharan Africa have albinism. In some countries most of them die from skin cancer between **30 and 40**. Many also have low vision. (United Nations)

## Young

Skin cancer is "a leading cause of death" in people with albinism, who "develop skin cancer young, often in early adulthood." (WHO cancer agency, IARC)

## 25% vs 7%

of skin-of-colour shoppers name white cast as a barrier to sunscreen, vs White respondents. They want to buy; the products don't fit. (Wang et al., 2024)

Sources: United Nations, International Albinism Awareness Day (un.org/en/observances/albinism-day) · IARC, Persons with albinism (albinism.iarc.who.int) · Wang et al., J Drugs Dermatol 2024;23(6):456-462.

THE SOLUTION

# One selfie + your trip → a skin forecast for every day.

Built around the brief's three moments, on a trip.

Before a purchase

## Before you fly

YouCam reads skin type by zone, 8 concerns and sun type I–VI. Real hourly weather per city becomes a daily forecast, a burn clock, and a kit of real products with checkout.

After a breakout

## Day 3 in a new city

Rescan in the hotel. Parasol shows only real changes, names the likely cause from the weather since you landed, and gives a "tonight" list and a safety line.

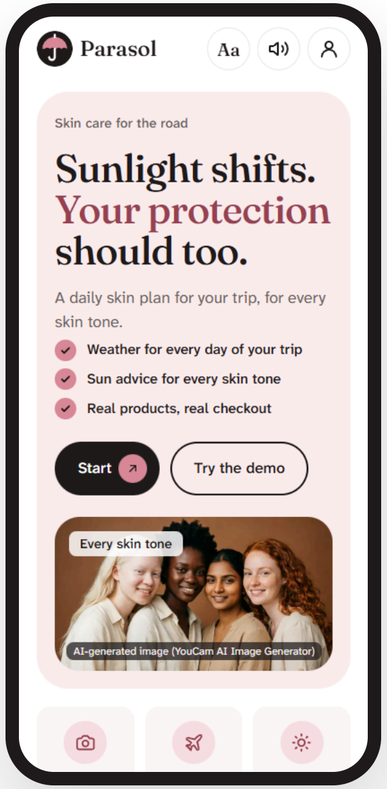

At the mirror

## Every morning

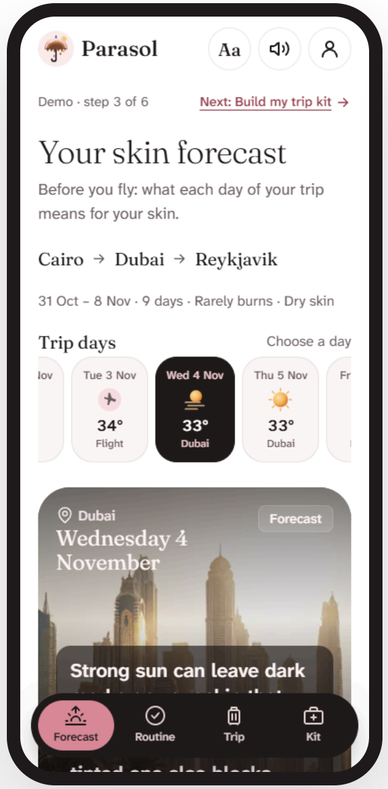

Today's routine for today's weather, read aloud, and a sun timer that counts down to your next reapply.

THE PRODUCT

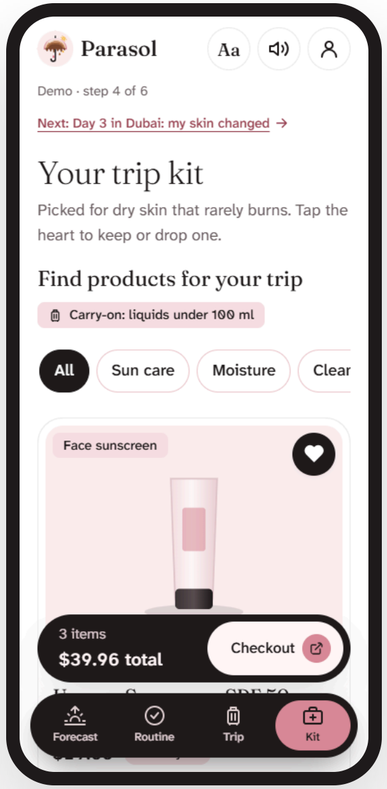

# Live app, mobile-first. Try the demo with no selfie.

Start

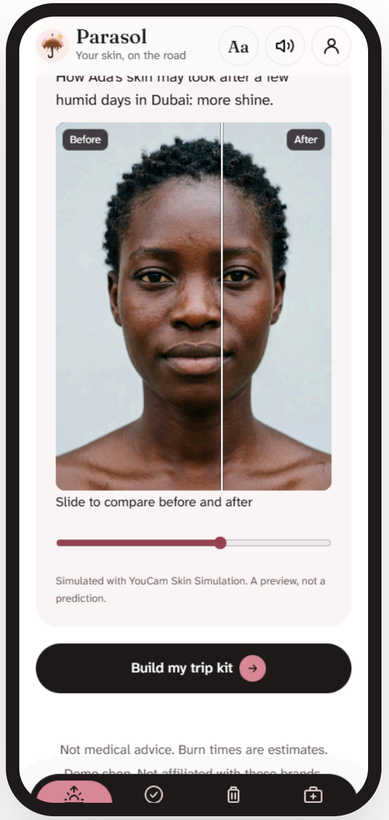

Forecast + burn clock

Kit, with why

Today + sun timer

Skin Simulation

HOW YOUCAM POWERS IT

# Five YouCam tools, one photo upload.

### Upload once

`POST /file/skin-analysis`
→ one `file_id`

→

### Skin Analysis

9 actions; skin type per zone (T-zone, cheeks), 8 concerns with masks

### Fitzpatrick

Face check, then sun type I–VI. Drives the burn clock.

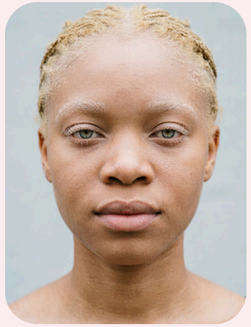

→

### Skin Simulation

"How your skin may look after a few humid days", from your forecast. Before/after.

### AI Image Generator

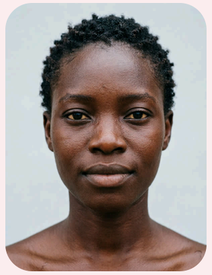

Text-to-image: demo faces and travel scenes. All labelled.

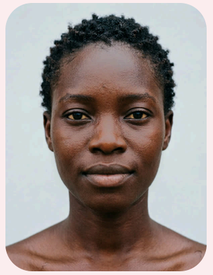

The honest moment

## YouCam read type V. Parasol uses type I.

On Sam's AI-generated face (albinism) the analyzer returned type V. Parasol shows the real reading, then protects with type I when you say you have albinism. One tap to change it.

Ada, before and simulated "Day 3 in Dubai". Then analysed for real. Units guarded: caps, unit floor, cache by photo hash.

INCLUSION AND ACCESSIBILITY

# Built for both ends of the sun scale.

**Albinism, very fair**

Burn clock and protect hours from UV 2. Albinism always uses the most protective sun type. Hat, sleeves, UV400 glasses in the kit.

**Deep skin**

Never told to skip sunscreen, at any UV (a test checks it). Dark-mark advice, and no-white-cast sunscreens first.

**Low vision**

Big text, AAA contrast, gentle dark for light-sensitive eyes, read aloud on every page, screen-reader landmarks, 48 px targets.

BUSINESS MODEL

# Free for travellers. Paid by the people who sell to them.

## Kit commission

When a traveller buys their trip kit, Parasol earns a commission (affiliate or shop revenue share, typically 5–15%). Works from day one.

## Travel partners

Hotels, airlines and travel apps send guests a pre-trip skin forecast and share the kit revenue.

## Retailer widget

Pharmacies, duty-free and beauty retailers add a "Where are you travelling?" kit builder, for a monthly fee.

## Free for albinism charities

Funded by the models above. **For Perfect Corp:** YouCam already powers 800+ beauty brands; Parasol takes YouCam into travel and travel retail, new places for those brands to reach buyers.

WHERE IT STANDS, HONESTLY

# Working and live. Not yet tested with users.

- **Live app** on Vercel, with a zero-setup demo
- **Real YouCam calls**: Skin Analysis, Fitzpatrick, Skin Simulation
- **Real weather** from Open-Meteo, every day of the trip
- **Real Shopify checkout** (dev store, test payments)
- **218 offline tests**, including 68 attack tests

Next step

## Test with real people

Parasol hasn't been tested with people with albinism or low vision yet. That's the first thing to do: with albinism groups in Nigeria, on low-end phones.

ROADMAP

# What's next.

Now

## User testing

With albinism groups in Nigeria and across Africa. Make it fast on low-end phones.

Next

## Brand catalogs

Retailers plug in their own products: "your trip kit" next to a YouCam scan.

Then

## On the road

A rescan reminder on day 2 or 3, and offline mode for flights.

Later

## More languages

Yoruba, Hausa, Igbo and Nigerian Pidgin for read-aloud.
